

V STHUTHI

sthuthimarathe@gmail.com | +91 8548012996 | LinkedIn | GitHub | LeetCode

MCA student specializing in deep learning, computer vision, and NLP eager to apply PyTorch-based ML research to maternal-fetal health imaging at Origin Medical Research Lab.

EDUCATION

BMSIT&M, Bengaluru – Master of Computer Applications

2025 – 2027 | CGPA: 8.05

Sindhi College, Bengaluru – Bachelor of Computer Applications

2022 – 2025 | CGPA: 9.02

TECHNICAL SKILLS

Deep Learning & CV: PyTorch, CNNs, image classification/segmentation/object detection, landmark detection, model optimization, hyperparameter tuning

ML & NLP: BERT, Transformers, Scikit-learn pipelines, GMM, PCA, Gaussian methods, sentiment analysis

Libraries & Tools: OpenCV, Pandas, PIL, Matplotlib, NumPy, HuggingFace, Flask, Streamlit

Languages: Python (primary), SQL, Java, C

Engineering Practices: Git & Git workflow, end-to-end ML pipelines, model deployment, reading & implementing academic papers

Visualization: Tableau, interactive dashboard design, interpretable ML visualization tools

EXPERIENCE

Software Developer Intern – StrateGen

Jan 2026 – Mar 2026 | Bengaluru

- Shipped 2 client projects ahead of schedule, directly driving a 100% client retention rate across all active accounts.
- Overhauled internal documentation workflows for development and accounting teams, eliminating 2 hours of administrative overhead per week.

Project Intern – Nano Robotics Embed Technologies

Feb 2025 – Mar 2025 | Bengaluru

- Executed 5+ model simulations for the core engineering team, generating structured performance reports that replaced manual analysis workflows entirely.
- Synthesized simulation outputs into 5 decision-ready reports, accelerating engineering review cycles and cutting data preparation time by ~30%.

PROJECTS

Transformer-Powered Sentiment Analysis | Python, BERT, HuggingFace, PyTorch

- Fine-tuned a BERT Transformer model with custom NLP pipelines, achieving 93% classification accuracy. Hands-on experience with the PyTorch training loop, hyperparameter tuning, and model evaluation central to this role.
- Architected the pipeline for multilingual extensibility, applying the same scalable design thinking required for generalizing fetal ultrasound models across diverse patient populations.

Gaussian Methods in Machine Learning | Python, Scikit-learn, PyTorch

- Implemented Gaussian ML techniques (whitening, GMM, PCA) from a 2025 research paper end-to-end, translating theoretical methods into working code, directly mirroring the academic-paper-to-implementation workflow at Origin Medical Research Lab.
- Engineered annotated, benchmarked reference implementations with comparison tables, enabling reproducible experimentation across statistical ML preprocessing tasks.

Movie Recommendation System | Python, Streamlit, Scikit-learn

- Developed and deployed a content-based filtering model across 5,000+ items as a live Streamlit web app, gaining real-world experience in end-to-end model development and deployment frameworks.
- Optimized multi-attribute metadata weighting to mitigate cold-start limitations, improving recommendation precision for low-frequency queries.

Hogwarts Archives: API-Driven Data Engineering | *Python, REST API, Pandas*

- Engineered an automated end-to-end data pipeline to extract, transform, and unify REST API data, aggregating 1,500+ records across heterogeneous entities with full schema standardization.
- Released the unified dataset on Kaggle as an open-access research resource, advancing reproducible data science practices.

Netflix Data Visualization | *Tableau*

- Designed an interactive analytical dashboard across 7,000+ titles spanning 50+ countries, surfacing global content distribution patterns and regional gaps to support data-driven strategy decisions.

ACHIEVEMENTS

- Engineered and launched **kadane-js**, an open-source npm library implementing Kadane's algorithm, translating algorithmic research into a production-ready, publicly accessible software package.
- Solved **80+ DSA LeetCode problems** using C++, demonstrating strong problem-solving skills and proficiency in algorithmic thinking.

DATASETS (ON KAGGLE)

- Who Lives Who Drowns: Titanic Survival: 891-row binary classification with passenger demographics and survival outcomes.
- Scribbles to Science: 1,797 digit samples with 64 pixel features for 10-class image classification.
- Iris: Petals & Flowers: 150-sample multiclass classification across 3 iris species.
- The Emotion Behind Every Movie Review: 5,000 movie reviews labeled positive or negative for NLP classification.
- Cells Dont Lie: A Data Driven Fight Against Cancer: 569 biopsy records with 30 nuclear features for malignant vs benign classification.
- Bricks Beds and Billions: 1,460-row regression dataset with 35 features for predicting residential sale prices.
- Heartbeat: Can Numbers Predict a Serial Killer: 303 patient clinical records for binary classification of heart disease.

CERTIFICATIONS

- Data Science: ML and Deep Learning with Python, Udemy (Nov 2025)
- Data Analysis & AI: From Data to Intelligent Decisions, Udemy (Jan 2026)
- Foundations: Data, Data, Everywhere, Google / Coursera (Jan 2026)
- Java Programming, Udemy (Mar 2026)
